

What We Do

Estimato

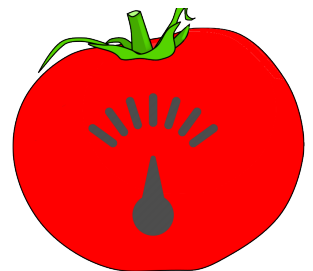

**An automated billing system for
vegetables and fruits in
supermarkets**

How It Works

Estimato

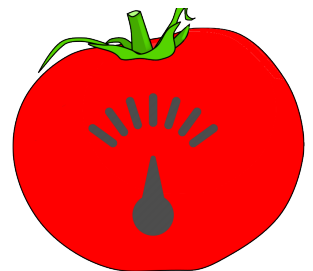

- ➊ **Estimato is an IoT based solution**
- ➋ **Weight sensors are used to estimate weight**
- ➌ **Image recognition is used to label the item being billed**

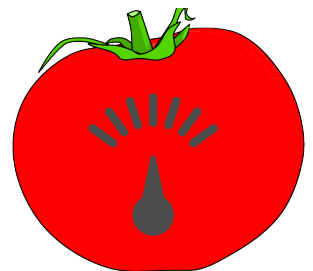

Customer Need

Estimato

**Customers hate standing in
queues in supermarkets**

**Vegetables and fruits need to be
labelled and weighed manually
before billing which creates a
queue at two places**

Progress

Estimato

- **Mobile app developed for customers**
- **Camera and weight sensor based IoT device developed**
